

AI-Powered Career & Skill Gap Analyzer Project Plan

1. Project Objective

Build a data analytics system that analyzes job market trends, identifies in-demand skills, and provides personalized skill gap analysis and career recommendations.

2. Tools & Technologies

Python (Pandas, NumPy), SQL, Power BI, Optional: Streamlit for UI, Web scraping libraries.

3. Phase 1: Data Collection

Collect job data from platforms like LinkedIn, Naukri, Indeed. Extract job title, skills, salary, location.

4. Phase 2: Data Cleaning

Handle missing values, standardize skill names, remove duplicates, format salary and location data.

5. Phase 3: Data Analysis

Analyze top skills demand, salary trends, city-wise job distribution, skill combinations.

6. Phase 4: Dashboard Development

Create Power BI dashboard showing insights like top skills, salary trends, job heatmaps.

7. Phase 5: Skill Gap Analyzer

User inputs skills → system compares with job data → outputs missing skills and match percentage.

8. Bonus Features

Resume analyzer, AI suggestions, live dashboard deployment.

9. Final Outcome

A complete end-to-end data analytics project demonstrating business insights and decision-making ability.
